

Welcome to Pop Parties! Thank you for taking the time to read our blog post on realistic wedding budgeting! Now, it's your turn to establish your realistic wedding budget with just a few easy steps. All you need is this PDF, a calculator, and an open mind!

STEP ONE: Talk to family about what they are able to contribute to your wedding day financially and set your "target" budget.

$$\boxed{25,000} + \boxed{25,000} + \boxed{10,000} = \boxed{60,000}$$

family one                      family two                      the couple                      TARGET BUDGET

STEP TWO: Determine your guest count for the event

$$\boxed{200}$$

# of guests

STEP THREE: Let's work backwards by taking your target budget and dividing it by your guest count to achieve your overall cost per person for the wedding.

$$\boxed{60,000} / \boxed{200} = \boxed{300}$$

target budget                      # of guests                      average cost per person

STEP FOUR: Identify which tier you fall into based on the average per person spend by referring to our blog post [HERE](#). Remember, there is no right or wrong, just setting expectations early!

$$\boxed{3}$$

Tier for Wedding Spend

#### QUICK TIPS

- Hire desired tiered vendors for priority items.
- Hire lower tiered vendors for unimportant items.
- It's more than OK to mix tiers!
